## Resume

1. \*\*Performance\*\*: The website scored a 38 out of 100 in this category. This means that the website could be improved to load

faster, which would enhance user experience and engagement. Faster loading times can also help with search engine rankings.

- 2. \*\*Accessibility\*\*: The website scored a 94 out of 100 in accessibility. This is generally good news as it indicates that the site is relatively easy to use for people with various abilities, including those with disabilities such as visual impairments or motor control difficulties. There is still room for improvement, but the website is on the right track towards being more inclusive.
- 3. \*\*SEO\*\*: The website scored a 63 out of 100 in search engine optimization (SEO). This means that there are opportunities to improve the site's visibility and ranking on search engines like Google. Some possible areas for improvement include optimizing images, improving mobile usability, and adding meta descriptions and keywords to pages.
- 4. \*\*Best Practices\*\*: The website scored a perfect 100 in this category. This means that it follows all the best practices recommended by industry experts for web development and design. Good job! However, keep in mind that best practices can change over time, so it's important to stay up-to-date and make adjustments as needed.

Overall, these scores provide a snapshot of how well your website is doing in key areas such as performance, accessibility, SEO, and following best practices. To improve the performance of your site, focus on optimizing its speed and efficiency. For SEO, consider making changes to help your site rank higher on search engines and be more visible to potential visitors. Lastly, continue to follow best practices for web development and design to ensure that your website remains current and effective.
